(then named Square, Inc.) on 13 October 2013.[11][2] It was originally branded as Square Cash.[9] It aimed to help users send money to one another with a debit card via email or text message, regardless of what bank each party used.[12][7] Block's cofounder Jack Dorsey and Brian Grassadonia contributed to the product creation.[13][14] Square Cash allowed users to send up to $2,500 a week in several transactions or all at once, and worked only in the U.S. It was meant only for person-to-person money transfers, and not for online or off-line shopping.[7]In August 2014, Block said that Square Cash users had sent "hundreds of millions of dollars" to one another.[12]In March 2015, Square introduced Square Cash for businesses. This allowed individuals, organizations, and business owners to create a unique username to send and receive money, known as a $cashtag.[8]In September 2016, Cash App announced a guarantee of "instant deposit" for the money received via Cash App, if the user agreed to pay a 1% fee. Users would otherwise see deposits post to their Cash App account on the next business day. Block also introduced virtual payment cards that allow Cash App users to make purchases on websites and apps using money stored in the app.[15]In January 2018, Cash App added support for bitcoin trading.[16][17]In October 2019, Cash App added support for stock trading to users in the United States.[18]In November 2020, Square announced it was acquiring Credit Karma Tax, a free do-it-yourself tax-filing service, for $50 million and would make it a part of its Cash App unit.[19]In 2021, Block announced an extension of the Cash App service to people over 13 years old for depositing and spending money or sending it to friends. Minors would not have access to investing or bitcoin features, however, and would still need their parent or guardians permission and significant oversight to use the app.[20]According to a Pew Research Center report in September 2022, Cash App was found to have been used at least once by 26% of U.S. adults. The report also stated that lower-income adults were the most likely to use the app over other payment apps.[10]In August 2023, Block announced a closure of Cash App's operations in the European Union under the "Verse" brand, citing a lack of growth and profitability in the market.[21] On September 7 and 8, 2023, Cash App experienced a service outage, affecting peer-to-peer payments and cash card purchases for thousands of users. Block stated on September 8 that the service was restored successfully by that day.[22][23]In February 2024, the service reported 57 million monthly transacting user accounts, $14.7 billion in revenues and $248 billion in inflows for the year 2023.[6][24][25] In June 2024, Block announced it was dropping its plan to launch Cash App in Australia.[26] In the following month, Cash App announced it would cease operations in the United Kingdom on September 15, 2024.[27]In August 2024, Cash App settled a $15 million class-action settlement for data and security breaches at the service. Users whose accounts were accessed without their authorization or who had fraudulent withdrawals or transfers could file claims for up to $2500, provided they had an account between August 23, 2018, and August 20, 2024. The class-action pointed a security breach in 2021, and another in 2023. As part of the settlement, Cash App and Block also agreed to take steps toward strengthening data security, while denying any wrongdoing.[28]In January 2025, Block agreed to pay, as part of a settlement, a fine of $80 million to a group of 48 state financial regulators after the agencies determined the company had insufficient policies for policing money laundering through Cash App. As part of the settlement, the company also agreed to involve an independent consultant to review its Bank Secrecy Act and anti-money laundering program, and report back to the states on any deficiencies. Block stated at the time that the issues were mainly related to Cash App's prior compliance program, and the company has significantly increased investment in compliance and risk management.[24]In February 2025, Block reported that Cash App had $16.25 billion in annual revenues and $282.9 billion in annual inflows for the year 2024.[1]The service allows users to send, receive, and store money within the United States, although international transfers were not initially supported.[29] Users can transfer money out of Cash App to a bank account in their country. The Cash Card is a customizable debit card that allows users to spend their money at various retailers and withdraw cash from an ATM.[30][31][32] When signing up for the Cash Card, users can customize it by selecting a color, adding stamps, drawing on it, and even making the card glow in the dark. The card with the final design is mailed to the user.[33]As of March 7, 2018, the Cash App supports automated clearing house (ACH) direct deposits.[30] Cash App also supports cash deposits, called "Paper Money Deposits": cash is taken to a participating retailer, who scans a barcode to deposit the money with Cash App, which charges a fee of $1 or more, depending on the retailer.[34] As of August 2024, Cash App offers a 4.5% annual percentage yield (APY) on savings, provided that the account is set up to receive a monthly direct deposit of at least $300. Balances stored on the Cash App Card are FDIC-insured through Wells Fargo Bank for up to $250,000 per person.[35]Users can request money from and transfer to other Cash App accounts via phone number, email, or $cashtag.[36]In 2018, the capability to buy and sell bitcoin cryptocurrency was added to the app.[37]In 2020, the capability to trade stocks was added to the app for users in the United States.[38]In October 2023, it was reported that Cash App allowed a subset of users to borrow up to $200 from the app.[4]In November 2020, Square acquired the tax-preparation division of Credit Karma, rolling it into the Cash App offering as Cash App Taxes.[19] The service offers online tax filing in the US, and is free to use for consumers, as it was before the acquisition. In March 2023, USA Today rated it "best overall", while noting that it didn't accommodate "every tax situation".[5]As of November 1, 2021, Square had a market capitalization of $117.4 billion.[39] Its largest market competitor is PayPal, which owns Venmo. Other major competitors include Apple Pay, Google Pay, and Zelle.Cash App is free to download for Android devices from Google Play, for iOS devices from the Apple App Store, and other mobile store platforms. Because the app is initially free, it incentivizes more users to create an account and use its services. Additional services beyond standard money transfers are available for small initial fixed costs plus percentage fees.[40]Cash App's primary income is from users withdrawing funds from the app to their linked bank accounts. Money can be transferred into a third-party bank account without charge within five business days, or instantly for a 1.5% fee.[41]If users do not have a direct deposit account with the app, they will be charged a $2 fee for withdrawing money from an ATM. Cash App allows users to buy and sell bitcoin from their platform for a small service fee based on the current bitcoin market volatility. Businesses can also accept Cash App as a form of payment and charge a transaction cost of 2.75%.Like banks, Cash App can lend money deposited by users to various institutions, charging interest, known as money creation. Cash App is required to hold 10% of users' accounts liquidity as part of the fractional-reserve banking to protect depositors in the event of a bank run.Cash App is among a group of peer-to-peer payment platformssuch as Zelle, Venmo, Apple Pay and Google Paythat do not provide features to recover money sent by users to others.[42]The app states it uses multi-factor authentication and account transaction limits to prevent fraud.[43] Cash App uses standard encryption and fraud detection technology to protect users' data.[35]Cash App and other payment platforms including Zelle, Venmo, Apple Pay and Google Pay have been reported as targets for Internet fraud.[42] Common scams include customer support impersonation, fake offers and programs, and the selling of fake expensive items.[44] There is little buyer protection, making these scams hard to dispute, unlike payment services such as PayPal.[45]Since the start of the COVID-19 pandemic and the rise in use of payment apps, there has been a notable increase in reported scams.[46] In one instance, a man was scammed out of $24,000 by customer support impersonation.[47] In another instance, a scammer used the public video of a female Waffle House worker holding a baby in a kitchen to fabricate an emotional story. The scammer used social media to share their Cash App information in the hope of receiving donations.[48]Millennials frequently utilize payment platforms like Cash App and Venmo to pay for illegal drugs or gamble.[49] In June 2021, police in West Baltimore arrested seven people for using Cash App to sell cocaine and heroin to nearby neighborhoods.[50]In 2018, Cash App surpassed Venmo in total downloads (33.5 million cumulative), becoming one of the most popular peer-to-peer payment platforms.Cash App is mentioned by about 200 hip-hop artists in their song lyrics, leading some to assert that it is now "ingrained in hip-hop culture," with its popularity stemming from the Black community in Atlanta.[51] Some cite the early adoption of cryptocurrencies among members of the rap community as another reason for Cash App's cultural cachet. The popularity of the app in hip-hop is reflected in Square's partnerships with prominent rappers, such as Travis Scott, Megan Thee Stallion, and Cardi B.[51]Social media influencers frequently use Cash App to request donations from their followers. Every Friday since 2017, Twitter users retweet posts from the official Cash App account with the #SuperCashAppFriday hashtag to potentially win $10,000 to $50,000. These posts often have a notable amount of engagement.[52]^ a b c "Block, Inc. Form 8-K; Current Report Pursuant to Section 13 or 15(d) of The Securities Exchange Act of 1934". He first became known for his semi-eponymous debut single with Epic Records, "Cashin' Out", which peaked at number 36 on the Billboard Hot 100 in 2011. His debut album Let's Get It, was released on August 26, 2014, and was preceded by the lead single "She Twerkin".ChatGPT0.0 / 0 votescash out"Cash out" refers to the process where an individual or enterprise converts an asset, investment, or any form of tangible or intangible property into liquid cash. This can be achieved by selling the asset, closing a bank account, or any other method that involves the conversion of non-cash asset or investments to cash. This term is typically used in regards to investments, real estate, online gambling and businesses. In some contexts, it may also refer to the act of withdrawing money from a pension plan, retirement fund, or a similar account.Suggested Resources5.0 / 1 votecash outSong lyrics by cash out -- Explore a large variety of song lyrics performed by cash out on the Lyrics.com website.Matched CategoriesAnagrams for cash out How to pronounce cash out?How to say cash out in sign language?NumerologyChaldean NumerologyThe numerical value of cash out in Chaldean Numerology is: 2Pythagorean NumerologyThe numerical value of cash out in Pythagorean Numerology is: 6Michael Razewski:Unless GM can leverage its investment in Lyft to accelerate its own robo-taxi ambitions with Cruise, we believe it would be appropriate to cash out its stake to repurchase its own under-valued shares.Dimantha Mathew:We are advising investors to cash out 30 percent of their portfolio with expectation of one-year t-bill yield to move up to 10 percent by end of the first half given tight global funding for Sri Lanka.Ted Cruz:The answer to these challenges will not simply be shoveling cash out of Washington, the answer to these challenges will be getting people back to work.Tom Robinson:At the moment, criminals want to cash out in euros or whatever in order to benefit from their criminal activity.West Palm Beach:Get water, get gas, get cash out of the ATMs, the more we hear about this storm, it sounds like a serious one. Positive cash flow is essential for financial health and can be managed through forecasting, expense control, and financing strategies. Key factors influencing cash flow include accounts receivable/payable, payroll, cost of goods, and unexpected events.Businesses assess cash flow using financial ratios and report it through a cash flow statement. However, cash flow analysis has limitationsit may overlook hidden costs or underlying financial issues. To gain deeper insights, advanced models like Discounted Cash Flow (DCF) can be used.What Is The Difference Between Cash Inflow and Cash Outflow?Cash In"Cash In" is the money that comes into the business from various sources. The primary source is sales revenue from selling products or services. Another source is the collections from accounts receivable (payments from customers). Businesses also attract cash inflows from loans and investments. Cash inflow is an essential financial Key Performance Indicator (KPI) monitored closely by management teams, as highlighted in this article about Financial KPIs.Cash OutOn the flip side, "Cash Out" is money leaving the business. It goes towards operating expenses such as payroll, rent and utilities. Other major categories include inventory purchases and loan repayments (with interest). Keeping a tab on cash outflows is equally essential as monitoring inflows.Examples Of Cash InflowsTo help visualize, consider a clothing manufacturer. It may receive cash inflows from selling clothes (sales revenue), a fashion boutique settling its bill (accounts receivable collections), or a loan taken to expand its manufacturing plant.Examples of Cash OutflowsThe same clothing manufacturer experiences cash outflows when it pays salaries to its employees, buys fabrics and other materials for production (inventory purchases) or services its expansion loan.Effective Cash Flow ManagementWhy does this all matter? Because having more cash coming in than going out (positive cash flow) is crucial for any business's financial health and growth. Here are a few strategies businesses use to manage their cash flow:Create cash flow forecasts and budgets to predict future cash needs.Negotiate better payment terms with suppliers to delay cash outflows.Implement inventory management techniques to avoid overstocking and understocking.Control operating expenses to reduce unnecessary cash outflows.Explore various financing options to meet cash needs.Factors Affecting Cash FlowSeveral factors can impact cash flow, including:Accounts receivable: Late payments from customers can cause cash flow issues.Accounts payable: Early payment to suppliers can lead to a cash shortage.Headcount: The number of employees affects payroll expenses, a significant cash outflow.Cost of Goods: The cost to produce goods or services directly impacts profitability and cash inflows.Special Events: Unforeseen circumstances or investments like launching a new product or a natural disaster can significantly impact cash flow. By strategically managing these factors, businesses can positively influence their cash flow.The Importance of Cash Flow RatiosCash flow ratios are key financial indicators used to assess a company's cash flow situation. Some common cash flow ratios include:Cash Flow Coverage Ratio: Shows the ability of a business to cover its debts and obligations.Cash Conversion Cycle (CCC): Measures how efficiently a company manages its working capital. Learn more about CCC here.Free Cash Flow Ratio: Reveals how much cash a company has left after paying for its operating expenses and capital expenditures.Financial ratios give insights into a company's cash flow performance and provide a basis for comparisons over time or against competitors.How To Calculate and Report Cash Flow: Cash flow is calculated and reported using a cash flow statement. It divides cash inflows and outflows into three categories: operating, investing and financing activities. Summing up these categories gives the net change in cash during a specific period.Limitations of Cash In Cash Out AnalysisWhile cash inflow and outflow analysis is useful, relying solely on it has limitations:Cash flow fluctuations might be symptoms of underlying issues that need investigation.For service-based companies, cash in cash out analysis might not consider below-the-line costs like rent, which can distort the cash flow view.For this reason, you might want to consider using more advanced financial models such as the Discounted Cash Flow method.Cash In Cash Out: The Bottom LineEffective cash in, cash out management is critical for business success and financial stability. It involves understanding the sources and uses of cash, recognizing factors affecting cash flow and utilizing relevant ratios. However, it's also essential to understand the limitations of cash flow analysis and ensure it's not the sole determinant of financial decisions.Are you ready to optimize your business's cash flow and profitability? Explore our Profitability Analysis Software to get started on your journey towards better financial management. The Cash App has been rising in popularity for quite some time now, thanks to its ease of payments and compatible payment platforms. Cash app, which is developed by Square Inc. allows you to sign up using your email or phone number and then link your debit card, credit card, or bank account to it. You can then send and receive instant payments from all contacts that are currently using the Cash app. If you have been a user of the app then you might have heard the term Cash Out. Lets take a quick look at it. What is Cash Out in the Cash app? The cash app uses its own payment platform to transfer and receive payments instantly. The app archives this by acting as an intermediary between you and your bank. Once you send or receive a payment, it is added to your cash app account instead of your bank account. This is what allows the Cash app to make instant payments regardless of your payment platform. If you wish
